Allergies    No known allergies

Short Term Goals	after debridement today	KBI3953
Long Term Goals	4 weeks 1) Full closure of all wound PROGRESSING CONTINUE 6/5/25	KBI3953
Assessment  Patient Would Benefit from Skilled Physical Therapy to address-(Check all that Apply)	Selective Debridement; Wound Cleansing; Non Selective Debridement; Dressing Changes; Physical Agents Modalities; Other*  unna boot	KBI3953
Patients Response to Treatment	Pain is not the focus of Treatment session	KBI3953
Planned Treatment Frequency	1-3 times per week	KBI3953
Planned Treatment Duration	Until Goals Achieved	KBI3953
Describe any treatment that was separate and distinct from the Evaluation_Re-assessment.	Pt seated on mat with RLE extended over stool for treatment. R foot covered with kerlix and gauze, removed without drainage.  Foot rinsed with saline and patted dry. Sterile scalpel and forceps used to remove moderate amount thick skin from callous at met head. Packed with Prisma and silvabsorb and topped with hpfax. Sterile forceps and scalpel used to shave edges of slight macerated tissue on heel of foot. No tunneling or odor this date. Topped with silvabsorb and 4x4 gauze. Entire foot wrapped with kerlix and coban. Will follow up in 2 weeks.  PT discussed wound care home services where supplies are sent to the home, but patient was very hesitant with this option.  PT wants to trial use of therahoney at home x 2 weeks. Patient is trying to get on the kidney transplant list and cannot undergo treatment until his wounds have healed up. PT will contact PCP as well to discuss alternative options to woundcare in attempts to expedite the healing process.	KBI3953
<b>Rehabilitation Fall Risk Assessment</b>		
Rehabilitation Fall Risk Assessment (Check all that apply)	No Issues Identified	KBI3953
Fall Risk Interventions	No Issues Identified	KBI3953
